

Grade 1 lessons

Counting, adding and taking away

IN THIS BOOK

1. Count and order
2. Adding to 20
3. Taking away
4. Bigger or smaller
5. Tens and ones

HOW TO USE IT

Read one lesson together, then practice it. Each lesson matches 5 questions in the Grade 1 Kahoot and Blooket sets, and one stop on the Grade 1 trail in the Math Trail app.

Every lesson has the big idea, the steps, two worked examples, one mistake to watch for, and the words to know.

Count and order

THE BIG IDEA

Counting numbers go in order. Each number is one more than the number before it. A number that comes later is bigger.

Count the dots. 2 rows of 5 makes 10.

HOW TO DO IT

1. Say the numbers in order: 1, 2, 3, 4, 5 and so on.
2. To find the number after, count one more.
3. To find the number before, count one back.
4. To put numbers in order, find the smallest first. Then find the next smallest.

WORKED EXAMPLES

What number comes right after 29?

Count one more. After 29 comes 30.

Put 14, 9 and 21 in order.

9 is the smallest. Next is 14. Then 21.
The order is 9, 14, 21.

WATCH OUT

After a 9 the tens change. 19 goes to 20. 29 goes to 30.

WORDS TO KNOW

before

the number that comes just earlier

after

the number that comes next

Adding to 20

THE BIG IDEA

Adding means putting groups together to find how many in all. The answer is called the sum.

HOW TO DO IT

1. Find the bigger number.
2. Start at the bigger number and count on the smaller number.
3. The last number you say is the answer.

WORKED EXAMPLES

$$8 + 3 = ?$$

Start at 8. Count on 3: 9, 10, 11. So $8 + 3 = 11$.

$$6 + \square = 10$$

Count from 6 up to 10: 7, 8, 9, 10. That is 4 counts. The missing number is 4.

WATCH OUT

You can add in any order. $3 + 8$ is the same as $8 + 3$. Start with the bigger number so you count less.

WORDS TO KNOW

sum

the answer when you add

count on

keep counting up from a number

Taking away

THE BIG IDEA

Subtracting means taking some away to find how many are left. The answer is called the difference.

HOW TO DO IT

1. Start at the first number.
2. Count back the number you are taking away.
3. The last number you say is the answer.
4. Check by adding: the answer plus the number you took away gives the first number.

WORKED EXAMPLES

$$12 - 4 = ?$$

Start at 12. Count back 4: 11, 10, 9, 8.
So $12 - 4 = 8$. Check: $8 + 4 = 12$.

$$15 - \square = 9$$

Count back from 15 to 9: 14, 13, 12, 11, 10, 9. That is 6 counts. The missing number is 6.

WATCH OUT

Order matters when you subtract. The number you start with goes first. $9 - 4$ is 5, but you cannot swap them.

WORDS TO KNOW

difference

the answer when you subtract

count back

count down from a number

Bigger or smaller

THE BIG IDEA

We use signs to compare numbers. $<$ means "is less than". $>$ means "is greater than". $=$ means "is the same as".

HOW TO DO IT

1. Look at the tens first. More tens means a bigger number.
2. If the tens are the same, look at the ones.
3. Point the open side of the sign at the bigger number.

WORKED EXAMPLES

$$47 \square 52$$

47 has 4 tens. 52 has 5 tens. 52 is bigger, so $47 < 52$.

$$6 + 3 \square 9$$

First add: $6 + 3 = 9$. Both sides are the same, so $6 + 3 = 9$.

WATCH OUT

Think of the sign as a hungry mouth. It always opens toward the bigger number.

WORDS TO KNOW

greater than

less than

bigger than

smaller than

Tens and ones

THE BIG IDEA

A two-digit number is made of tens and ones. The first digit tells how many tens. The second digit tells how many ones.

HOW TO DO IT

1. Read the first digit. That is the number of tens.
2. Read the second digit. That is the number of ones.
3. Tens are worth 10 each. 4 tens is 40.
4. Add the tens and the ones together to get the number.

WORKED EXAMPLES

What is 4 tens and 7 ones?

4 tens is 40. Add 7 ones. $40 + 7 = 47$.

What is 10 more than 36?

Add one more ten. The tens digit goes from 3 to 4. The ones stay the same. The answer is 46.

WATCH OUT

53 and 35 use the same digits but they are different numbers. 53 has 5 tens. 35 has only 3 tens.

WORDS TO KNOW

digit

one of the symbols 0 to 9

tens

groups of ten
