

Grade 2 lessons

Bigger sums, patterns, time and money

IN THIS BOOK

1. Adding to 100
2. Subtracting within 100
3. Skip counting
4. Even, odd and hundreds
5. Time and money

HOW TO USE IT

Read one lesson together, then practice it. Each lesson matches 5 questions in the Grade 2 Kahoot and Blooket sets, and one stop on the Grade 2 trail in the Math Trail app.

Every lesson has the big idea, the steps, two worked examples, one mistake to watch for, and the words to know.

Adding to 100

THE BIG IDEA

To add bigger numbers, add the ones first and then the tens. If the ones make 10 or more, carry a ten.

HOW TO DO IT

1. Write the numbers one above the other. Line up the ones and the tens.
2. Add the ones.
3. If the ones add to 10 or more, write the ones digit and carry 1 to the tens.
4. Add the tens. Include the 1 you carried.

WORKED EXAMPLES

$38 + 25 = ?$

Ones: $8 + 5 = 13$. Write 3 and carry 1.
Tens: $3 + 2 + 1 = 6$. The answer is 63.

$42 + 31 = ?$

Ones: $2 + 1 = 3$. Tens: $4 + 3 = 7$.
Nothing to carry. The answer is 73.

WATCH OUT

Do not forget the ten you carried. Write a small 1 above the tens so you remember it.

WORDS TO KNOW

carry

move a ten over to the tens column

Subtracting within 100

THE BIG IDEA

To subtract bigger numbers, subtract the ones first and then the tens. If there are not enough ones, borrow a ten.

HOW TO DO IT

1. Line up the ones and the tens.
2. Look at the ones. If the top digit is too small, borrow 1 ten. That gives you 10 more ones.
3. Subtract the ones.
4. Subtract the tens. Remember the top tens went down by 1 if you borrowed.
5. Check by adding your answer to the number you took away.

WORKED EXAMPLES

$52 - 27 = ?$

You cannot take 7 from 2, so borrow.
 $12 - 7 = 5$. The tens are now 4. $4 - 2 = 2$. The answer is 25. Check: $25 + 27 = 52$.

$68 - 25 = ?$

Ones: $8 - 5 = 3$. Tens: $6 - 2 = 4$. No borrowing. The answer is 43.

WATCH OUT

Always take the bottom digit from the top digit. Do not flip them when the top one is smaller. Borrow instead.

WORDS TO KNOW

borrow

take one ten and turn it into ten ones

Skip counting

THE BIG IDEA

Skip counting means jumping by the same amount each time. It makes counting faster and gets you ready for multiplying.

HOW TO DO IT

1. Look at two numbers next to each other. Find how big the jump is.
2. Check that the next jump is the same size.
3. Keep adding that jump to go forward. Subtract it to go back.

WORKED EXAMPLES

5, 10, 15, □

Each number is 5 more. $15 + 5 = 20$.
The next number is 20.

Count back by 10s: 70, 60, 50, □

Each number is 10 less. $50 - 10 = 40$.

WATCH OUT

Check the jump between more than one pair of numbers. The jump must stay the same all the way.

WORDS TO KNOW

pattern

something that repeats in the same way

Even, odd and hundreds

THE BIG IDEA

Even numbers can be split into two equal groups. Odd numbers have one left over. Bigger numbers have hundreds, tens and ones.

HOW TO DO IT

1. To tell even from odd, look only at the last digit.
2. If the last digit is 0, 2, 4, 6 or 8, the number is even.
3. If the last digit is 1, 3, 5, 7 or 9, the number is odd.
4. In a three-digit number, the first digit is hundreds, the second is tens, the third is ones.

WORKED EXAMPLES

Is 37 even or odd?

The last digit is 7. So 37 is odd.

What is 4 hundreds, 0 tens and 6 ones?

$$400 + 0 + 6 = 406.$$

WATCH OUT

Zero holds a place. 406 is not the same as 46. The 0 shows there are no tens.

WORDS TO KNOW

even

can be shared equally by 2

odd

has 1 left over when shared by 2

Time and money

THE BIG IDEA

A clock has two hands. The short hand shows the hour. The long hand shows the minutes. Coins each have their own value.

This clock shows 3:30. The long hand is on the 6.

HOW TO DO IT

1. Read the short hand first. It tells the hour.
2. Read the long hand. On the 12 it is :00. On the 3 it is :15. On the 6 it is :30. On the 9 it is :45.
3. For coins, learn the values: quarter 25, dime 10, nickel 5, penny 1.
4. Count the biggest coins first, then the smaller ones.

WORKED EXAMPLES

How many cents are 2 dimes and 3 nickels?

Count the dimes: 10, 20. Count on the nickels: 25, 30, 35. That is 35 cents.

A toy costs 35 cents. You pay 50 cents. How much change?

$50 - 35 = 15$. You get 15 cents back.

WATCH OUT

At 3:30 the short hand is halfway between 3 and 4. The hour is still 3 until the long hand gets back to 12.

WORDS TO KNOW

half past

30 minutes after the hour

change

the money you get back
